

Important Notes: 01) Investment in the E Fund Selection Investment Series – E Fund (HK) Select Bond Fund (the "Sub-Fund") is subject to normal market fluctuations and other risks inherent in the Sub-Fund's assets. Accordingly, there is a risk that you may not recoup the original amount invested in the Sub-Fund or you may lose a substantial part or all of your investment. 02) The Sub-Fund invests primarily in a portfolio consisting primarily of investment grade debt securities denominated in offshore RMB, USD, EUR or HKD which aim to generate a steady flow of income in addition to capital appreciation for the Sub-Fund and may be subject to a) Risks relating to debt securities (including Credit risk, Risks relating to credit rating, credit rating downgrading risk, Interest rates risk, Valuation risk, Volatility and Liquidity risk, Sovereign/government debt risk, Below investment grade or unrated securities risk and Risks associated with investments in debt instruments with loss-absorption features (LAP)), b) Concentration risk, c) Emerging market risk, d) Foreign exchange risk, e) Risks relating to sale and repurchase agreements, f) Risks relating to reverse repurchase agreements, g) RMB currency risk and RMB denominated classes risk, h) Hedged RMB denominated classes risk, i) Convertible bonds risk, j) Risks relating to equity securities, k) Eurozone and European country risk and l) "Dim sum" bond risk. 03) The Sub-Fund may invest in derivatives for hedging or investment purposes to the extent permitted by the Code and in adverse situations its use of financial derivative instruments may become ineffective and/or cause the Sub-Fund to suffer significant loss. 04) Distributions of the Sub-Fund may be paid out of the capital of the Sub-Fund. Investors should note that payment of distributions out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment and such distributions will result in an immediate reduction of the net asset value of the relevant units. The distribution amount and net asset value of the hedged unit class may be adversely affected by differences in the interest rates of the class currency of the hedged unit class and the Sub-Fund's base currency, resulting in an increase in the amount of distribution that is paid out of capital and hence a greater erosion of capital than other non-hedged unit classes. 05) You should not invest in the Sub-Fund unless the intermediary who sells it to you has explained to you that the Sub-Fund is suitable for you having regard to your financial situation, investment experience and objectives. 06) Investors should not invest in the Sub-Fund based on this document alone. Before making any investment decision, the investor should read the Sub-Fund's offering documents carefully including the risk factors.

Note: Past performance information is not indicative of future performance. Investors may not get back the full amount invested. Performance data has been calculated in the respective currencies of the classes, including ongoing charges and excluding subscription fee and redemption fee you might have to pay. No performance data can be displayed until 6 months from inception date. Where no past performance is shown there was insufficient data available in that year/period to provide performance.

¹ Including HK Classes and Mainland China Mutual Recognition Classes.

² "Launch Date" referenced herein denotes the launch date of the class. In the event of a full redemption followed by a relaunch, it refers to the date of the latest relaunch.

³ You should note that some fees may be increased, up to a specified permitted maximum 3%, by giving Unitholders at least one month's prior notice. For details please refer to the related section in the Explanatory Memorandum/Prospectus.

⁴ Previous USD Class I (Acc) has been renamed to USD Class I2 (Dis) effective from 13 Oct 2022.

⁵ Hedged RMB denominated Classes are subscribed in RMB and will hedge the Sub-Fund's Base Currency (USD) back to RMB, on a best effort basis, with an objective to align the performance of the hedged RMB denominated Classes to that of the equivalent Class denominated in the USD. This strategy may preclude the hedged RMB denominated Classes from benefiting from any potential gain resulting from the appreciation of USD against RMB. For hedged RMB denominated classes, investors have to bear the associated hedging costs and there is no guarantee that the hedging strategy will fully and effectively eliminate the currency exposure.

⁶ NAV-to-NAV return, total return with dividend (if any) reinvested.

⁷ Sector Exposure is expressed as a percentage of the aggregate market value of all holdings of time deposits, securities and derivatives (if any), where holdings such as collective investment schemes and derivatives (if any) are included in "Others".

⁸ Geographical Exposure refers to Bloomberg's Country of Risk and is expressed as a percentage of the aggregate market value of all holdings of time deposits, securities and derivatives (if any), where holdings such as collective investment schemes and derivatives (if any) are included in "Others".

Monthly Market Commentary

Market Review

In December 2025, the US fixed-income market diverged due to a steepening yield curve, with the 2-year and 10-year Treasury yields falling by 2 basis points and rising by 15 basis points, respectively. The Bloomberg US Intermediate-Term Aggregate Bond Index rose 0.1% this month. Although the Federal Reserve lowered the target federal funds rate by 25 basis points to a target range of 3.50%-3.75% as expected, which benefited short-term bonds, robust economic growth data pushed up long-term yields. The second revision of US third-quarter GDP data showed that the economy grew at a strong pace of 4.3%, far exceeding expectations. The stable US job market eased market concerns about an impending recession.

Portfolio Review

The portfolio slightly reduced its duration during this period, while maintaining the dispersion of its holdings. In terms of countries and regions, the portfolio continues to primarily allocate to the United States, the United Kingdom, and Germany. In terms of sectors, the portfolio maintains major allocations to banks, insurance, and sovereign debt.

Market and Portfolio Outlook

Looking ahead, interest rates are expected to have room for a short-term rebound, while credit spreads continue to hover at low levels. The portfolio will moderately increase positions as yields rise, continue to optimize the credit quality of holdings, and enhance risk-adjusted returns.
